ROWE HESSLER

SOFTWARE ENGINEER

White Plains, NY | rowehessler@gmail.com | (631) 764-7250
rowewh.com | github.com/RoweWh

PROFESSIONAL SUMMARY

Software engineer with degrees in Computer Science and Mathematics and over a decade of leadership experience in the speedcubing industry. Building full-stack applications with React, TypeScript, C#/.NET, Node.js, and SQL while using AI-assisted development to improve productivity and problem-solving. Eager to deepen my technical knowledge, gain professional software engineering experience, contribute to real-world products, and grow alongside experienced developers.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, HTML, CSS, Vite

Backend: C#, .NET, Node.js, Express, REST APIs

Data: SQL Server, SQL, MongoDB, Dapper, Dexie (IndexedDB)

Tools: GitHub Copilot, Git, GitHub, Vercel, Postman, Visual Studio, VS Code, SSMS

PROFESSIONAL EXPERIENCE

Production Manager — Cubicle Enterprises LLC (TheCubicle.com) / *2015 – Present*

- Co-founder and head of the Cubicle Pro Shop, the company's puzzle customization and production department; oversee daily operations and workflows, having led the department since its inception.
- Hire, train, and manage employees without prior speedcubing experience to perform highly technical, detail-intensive customization and assembly work.
- Improve production processes, coordinate priorities, troubleshoot operational issues, and maintain efficient workflows for specialized products.
- Lead quality control, setting standards for precision, consistency, product functionality, and customer satisfaction.
- Manage staffing and production decisions using extensive knowledge of competitive speedcubing and customer needs.

EDUCATION

B.S. Computer Science — Empire State University

B.S. Mathematics — St. Joseph's University

PROJECTS

droobTimer — Speedcubing Timer & Statistics Platform / *React · TypeScript*

- Built a browser-based timer featuring WCA-style scramble generation, solve history, session management, and performance statistics, with local data persistence using Dexie and IndexedDB.
- Developed reusable puzzle-state mapping and scramble visualizations across multiple puzzle types, applying TypeScript data modeling and algorithmic problem-solving.
- Engineered responsive timing and inspection workflows, reusable UI components, and a custom hand-drawn theme system, emphasizing maintainable frontend architecture.

BLDLab — Blindfolded Speedcubing Training Platform / *Full Stack*

- Built a full-stack platform for algorithm lookup, practice tools, user profiles, and personalized blindfolded-solving data.
- Developed Node.js, Express, and MongoDB services for authentication and user data.
- Designed a C#/.NET backend for processing, validating, sorting, and retrieving algorithms from a shared database, using SQL queries, stored procedures, and views for reusable data access.
- Integrated both backend services with a React frontend, connecting complex algorithm data and user-specific workflows in one application.
